

NITHILAN

Frontend / Full Stack Developer

Mail id : nbnithilan@gmail.com
portfolio : nithilan-jk8q.vercel.app

Phone : 9345283475
Git hub : <https://github.com/KNITHILA>

CAREER SUMMARY:

Results-driven and highly motivated Information Technology professional with a passion for software development, innovation, and solving complex real-world problems. Strong analytical and problem-solving abilities, combined with a commitment to continuous learning and technical excellence. Adept at adapting to new technologies, collaborating with cross-functional teams, and delivering high-quality solutions. Driven to contribute to impactful projects, embrace new challenges, and build scalable, user-focused applications while growing as a software development professional.

TECHNICAL SKILLS

- Programming Languages: Java, Python, JavaScript, TypeScript
- Frontend: React.js, Tailwind CSS, HTML5, CSS3
- Backend: Node.Js, Express Js, Firebase, Fast API, REST API Development
- Databases: MongoDB, SQL
- Core Computer Science: Data Structures & Algorithms , Object-Oriented Programming Database Management Systems , Operating Systems , Computer Networks , Software Engineering
- Developer Tools: Visual Studio Code , Git, GitHub, Postman , Figma

EXPERIENCE

Freelance Web Developer

- Developed responsive business websites using React and TypeScript.
- Designed scalable frontend architectures with reusable components.
- Improved website performance, accessibility, and user experience.
- Collaborated with clients to transform business requirements into production-ready applications.

Data Analytics Intern | Top Tech Developer

- Worked on data handling and analysis tasks using Python.
- Gained practical exposure to structured data processing and analytics workflows.
- Strengthened logical thinking and problem-solving through real-world data tasks.

Hardware Intern | Pride Global

- Gained hands-on exposure to hardware systems, troubleshooting, and technical operations.
- Improved debugging mindset and understanding of hardware-software interaction.
- Learned practical system-level workflows in a real-world technical environment.

EDUCATION

- KCG College of Technology – Chennai
- B.Tech in Information Technology | 2023 – 2027

PROJECTS

BLIND – AI-Based Nudity Detection and Blurring System

- **Tech Stack: Flutter, FastAPI, NudeNet**
- Developed a real-time AI-powered privacy protection application designed to detect and automatically blur explicit content in images and video streams.
- Integrated a pre-trained NudeNet model with a FastAPI backend to process media securely and efficiently with low response time.
- Built a Flutter-based mobile interface that enables users to interact with the system easily and monitor processed content in real time.
- Focused on improving digital safety and privacy by creating a solution that can be extended for live content moderation and secure media viewing.
- Presented the project at Nexathon Hackathon and secured 2nd Prize for its innovation and practical relevance.

GPA Mate – Automated Result Analyzer

- **Tech Stack: React, TypeScript, Tailwind CSS, FastAPI**
- Built a full-stack academic result analysis platform that helps students quickly interpret Anna University examination results in a structured and user-friendly format.
- Developed a responsive frontend using React, TypeScript, and Tailwind CSS to provide a smooth and accessible user experience across devices.
- Implemented backend APIs using FastAPI to process uploaded result data and generate readable GPA-based reports automatically.
- Reduced manual effort in result interpretation by transforming uploaded academic data into simplified performance summaries.
- Designed the system to improve usability, speed, and accuracy for students who want a faster way to understand their academic performance.

Noise Conflict Estimator

- **Tech Stack: Flutter, Dart, SQLite, Figma**
- Developed a mobile-based smart noise monitoring application aimed at helping users identify whether their surrounding sound levels may create disturbance in shared living environments.
- Designed the app to provide real-time sound awareness using color-coded risk indications such as Safe, Caution, and Disturbance Likely.
- Incorporated environmental calibration inputs such as room size, wall type, and background noise level to improve the accuracy of sound estimation across different spaces.
- Added support for local history logging and user-centered feedback mechanisms to promote responsible sound management and better awareness.
- Focused on building a practical and accessible solution for apartments, hostels, and residential spaces where noise conflicts are common.

Smart Parking Slot Booking System

- **Tech Stack: React, TypeScript, firebase, Fast2SMS**
- Developed a web-based smart parking slot booking system that allows users to reserve parking spaces in advance before arriving at malls or public destinations.
- Designed the booking experience similar to online ticket reservation platforms, enabling users to choose available slots, confirm bookings, and manage access easily.
- Built a responsive frontend interface that improves convenience by showing slot availability, booking flow, and parking confirmation in a clear and simple way.
- Implemented a QR-based verification concept where users can present the generated QR code at the parking location and use their assigned parking slot.
- Focused on solving real-world urban parking challenges by improving slot management, reducing search time, and enhancing user convenience.

CERTIFICATIONS

- CYBERSECURITY AND ETHICAL HACKING CERTIFICATION – GUVI,
 - DARK WEB – GUVI
-

ACHIEVEMENTS & ACTIVITIES

- WON 2ND PRIZE AT NEXATHON HACKATHON FOR DEVELOPING BLIND, AN AI-BASED REAL-TIME NUDITY DETECTION AND BLURRING SYSTEM
- ACTIVELY PARTICIPATED IN MULTIPLE HACKATHONS DURING 2023–2025, GAINING PRACTICAL EXPERIENCE IN PROBLEM-SOLVING, TEAMWORK, AND RAPID PRODUCT DEVELOPMENT.
